Circulation Services in a Small Academic Library May 07 2020 In a library, circulation is the process of lending books to borrowers and accurately reshelving them after they have been returned so that they will be retrievable by the next user. This basic cycle has many elaborations and sub-cycles attached to it, such as those for overdues and holds, the record-keeping process, and the reserve book operation. These sub-cycles vary from library to library, but the basic cycle remains the same in every library that allows patrons to remove books. Connie Battaile provides a detailed volume written for those new to the circulation department of small academic libraries. The author presents not the definitive way to run a circulation department, but rather she provides a variety of possible methods. Because the circulation department is the main public contact point, many library housekeeping chores are assigned to it. Again, these additional responsibilities vary from library to library, but the author provides various procedures. The physical environment of the department and the stacks, the staff, effective communications, and scheduling are covered in full detail.

Cryptography For Dummies Sep 22 2021 Cryptography is the most effective way to achieve data security and is essential to e-commerce activities such as online shopping, stock trading, and banking. This invaluable introduction to the basics of encryption covers everything from the terminology used in the field to specific technologies to the pros and cons of different implementations. Discusses specific technologies that incorporate cryptography in their design, such as authentication methods, wireless encryption, e-commerce, and smart cards. Based entirely on real-world issues and situations, the material provides instructions for already available technologies that readers can put to work immediately. Expert author Chey Cobb is retired from the NRO, where she held a Top Secret security clearance, instructed employees of the CIA and NSA on computer security and helped develop the computer security policies used by all U.S. intelligence agencies.
