Brief Strategic Family Therapy Mar 13 2021 "Brief Strategic Family Therapy (BSFT) is a strengths based model for diagnosing and changing repetitive patterns of behavior that cause friction in families. This clinical guide to BSFT shows how practitioners can transform family interactions from conflictive to collaborative, from habitual to proactive, so the love trapped behind anger can flourish. When, for example, a teen is acting

out, using drugs, or not attending school, the adults in the family need to assume leadership, and all members of the family must adapt their patterns of talking and behaving with one another for positive changes to take place. BSFT therapists aid in this process by analyzing how the family operates as a whole and the role that each member plays in the family organism. Readers of this book will learn how to engage reluctant families or family members, and structure 12 to 16 week cognitive and affective interventions that will effect powerful behavior change. Detailed clinical examples show practitioners how to navigate family complexities, and work through the challenging decision points they present"--

Teaching Family Therapy Jun 23 2019 The teaching of family therapy has been the subject of serious scrutiny since the onset of training and

accreditation many years ago, yet there are relatively few attempts to apply what we know about systems and the ways they change family therapy teaching as a two-way process. It is as though family therapy teachers were preoccupied with the content of what should be taught, and were not able to direct their attention to the process by which people learned. The authors began by describing the way they conceptualize the "learning context" which sets the frame for all the teaching they do. Then they discuss the process of setting up a family therapy course, e.g. "What is the best way to negotiate with a training officer to set up a course in a local area?". The book then moves to creating the course syllabus, and some of the practical problems-from lateness to mechanical failures-of getting the course off the ground.

The inclusion of a child in the family therapy process often changes the dynamic between client and therapist -- and between the clients themselves -- within the context of the counseling sessions. And yet, although this is such a common experience, many counselors and family therapists are not adequately equipped to advise parents on whether to include a child in therapy sessions. Once the child does make an appearance in the counseling session, the therapist is faced with the challenges inherent in caring for a child, in addition to many concerns due to the unique circumstance of the structured therapy. Counseling a child in the context of a family therapy session is a specific skill that has not received the attention that it deserves. This book is intended as a guide for both novice and experienced counselors and family therapists, covering a wide range of topics and offering a large body of information on how to effectively counsel children and their families. It includes recent research on a number of topics including working with children in a family context, the exclusion of children from counseling, and counselor training methods and approaches, the effectiveness of filial play therapy, the effects of divorce on children, and ADHD. Theoretical discussion is given to different family therapy approaches including family play therapy and filial play therapy. Central to the text are interviews with leaders in the field, including Salvador Minuchin, Eliana Gil, Rise VanFleet and Lee Shilts. A chapter devoted to ethical and legal issues in working with children in family counseling provides a much-needed overview of this often overlooked topic. Chapters include discussion of specific skills relevant to child counseling in the family context, case vignettes and examples, practical tips for the counselor, and handouts for parents.
