Goodyear F2G Corsair Pilot's Flight Operating Instructions Aug 15 2021 The Corsair was one of WWII's most superb fighters, achieving a victory ratio of nearly 11:1 in the Pacific. Had things worked out differently, its sister craft, Goodyear's F2G Super Corsair, might have eclipsed that record. Based on Goodyear's fixed-wing F1G design, the F2G had a bubble cockpit and was fitted with a Pratt & Whitney R-4360 engine. The twenty-eight cylinder, four row radial air-cooled monster provided nearly 50% more take-off power than the standard double Wasp. Yet by the close of WWII, only five F2G's had been built, and so the plane never saw combat. Originally printed by Goodyear and the U.S. Navy, this Flight Handbook taught pilots everything they needed to know before entering the cockpit.

SR-71 Flight Manual Mar 10 2021 This is the reprinted facsimile edition of the manual issued to crew members of the US Air Force's sleek SR-71, now available with photos and annotations by former Blackbird pilot Richard Graham. The Lockheed SR-71 Blackbird was a long-range, Mach 3 reconnaissance aircraft developed by Lockheed's top-secret Skunk Works. One of the first aircraft designed to have a low radar signature, the SR-71 could map 100,000 square miles from an altitude of 80,000 feet. Operational from 1964 to 1998, it is still the fastest jet-powered aircraft - a Blackbird once completed a Los Angeles-to-Washington, D.C. flight in 64 minutes. Naturally, reigning in all that technology and performance required some know-how on the parts of the pilots and ground crews. This massive volume, the SR-71 Flight Manual, is a facsimile reprint of the official flight manual issued to SR-71 crew members augmented with anecdotes and descriptions of flight procedures from former SR-71 pilot Col. Richard Graham

(Ret.). Divided into seven sections, the book covers in minute detail everything from the SR-71 trainer to normal and emergency operation procedures, navigation and sensor equipment, operating limitations, flight characteristics of the Blackbird, and all-weather operation. Now the official SR-71 flight manual is not only declassified, it's (at least partially) demystified as well!

Grumman F6F Hellcat Pilot's Flight Operating Instructions Apr 30 2020 The most successful naval fighter aircraft in history, the Grumman F6F Hellcat accounted for nearly 5200 kills during WWII. The Hellcat featured self-sealing fuel tanks, a bullet-resistant windscreen, and hydraulically-operated landing gear. The plane was rugged, and carried over 200 pounds of armor. Despite this, it was highly maneuverable and fast, thanks to a 2000 hp engine. Nearly 12,300 F6Fs were made during the war. They first saw action during the Tarawa invasion, and subsequently flew in every battle of the Pacific campaign. Hellcats accounted for nearly 75% of all aircraft kills in the Pacific. Originally created by the U.S. Navy, this flight operating manual taught pilot's everything they needed to know before entering the cockpit. It's a wonderful guide to one of history's great planes. Northrop F-89 Scorpion Pilot's Flight Operating Manual Nov 25 2019 The F-89 Scorpion was the first multi-seat, all-weather jet interceptor in the U.S. Air Force. It also became the first aircraft ever equipped with a nuclear air-to-air weapon, the 1.5 kiloton Genie missile. The F-89 made its debut in 1948, joined the Air Force in 1950, and then served as the mainstay of Air Defense Command for 17 years. Over 1,000 F-89s were produced, including 350 of the J₁ model equipped with pylons to carry the Genie. (One F-89 did fire the missile as part of Operation Plumbob in 1957.) Grumman F8F-2 Bearcat Fighter Aircraft Pilot's Flight Manual Jan 08 2021 The Grumman F8F Bearcat was designed to defeat the nimble Japanese fighter aircraft that appeared at the end of WWII. The conflict ended before the Bearcat could be placed into service, and although it eventually saw combat with the French in the Indo-China war, it never flew in harm's way in the U.S. Navy. One of the best piston-powered fighters ever built, the F8F could achieve a cruising speed of over 420 mph. In 1946 a Bearcat set a time-to-climb record of 10,000 feet in 94 seconds, a feat not matched until the advent of high-performance jet fighters nearly a decade later. Originally printed by Grumman and the U.S. Navy, this Flight Operating Handbook taught pilots everything they needed to know before entering the cockpit. Classified "Restricted", the manual was declassified and is here reprinted in book form. This affordable facsimile has been slightly reformatted. Grumman F7F Tigercat Pilot's Flight Operating Instructions Nov 06 2020 Built with twin, underwing engines, tricycle landing gear and shoulder-mounted wings, the Grumman F7F Tigercat was an unusual looking, all-metal fighter. It was also one of the highest-performance piston-engined fighters of all time. Originally designed as a carrier-based aircraft, the F7F failed its initial trials, and ended up flying primarily as a land-based attack aircraft for the Marines. Equipped with radar and a second seat for an operator, the Tigercat also flew as a night-fighter and reconnaissance platform. Although it was introduced in 1944, the Tigercat never saw action in WWII, and had a limited role in Korea. The F7F found a new role in non-military use, flying as a fire-fighting aircraft and camera ship for Hollywood in the 1970s. Originally printed by the U.S. Navy, this F7F Flight Operating Manual taught pilots everything they needed to know before entering the cockpit. This facsimile has been reformatted. It was also the heaviest production plane of the war with terrific range and bomb carrying capabilities. Carrying a crew of ten, the Superfortress devastated Japan in a series of gigantic raids in 1944-45. In the end it would be the B-29s "Enola Gay" and "Bock's Car" that dropped the atomic bombs and effectively ended the conflict.
