Rage Jan 24 2022 In a quiet working-class neighborhood in east-end Toronto, on an early winter day in November 2003, Johnathon Madden returned home from school only to be bullied and threatened by is older brother, Kevin; Kevin's friend Tim Ferriman; and another teenager. the confrontation turned violent and fatal. Johnathon didn't have the strength or size to protect himself against the frenzied attack of his powerful 250-pound brother. Sibling violence may be as old as time, but this case is particularly disturbing and unsettling. Kevin Madden had problems. This was not news to his family, teachers, principal, social workers, and psychiatrists. but what drove him to commit murder - and why Johnathon? Why were his friends compelled to take part in the bloodletting? What events were going on behind the scenes that played a part in the tragedy? Jerry Langton, author of bestseller Fallen Angel, sets out to answer those questions and look for the clues that drove Kevin Madden over the edge. His investigation takes him onto the streets of Toronto, where he unearths a disturbing teen subculture, into cyberspace, and into the confidence of neighbors and students who knew the Madden Family. Langton reveals shocking testimony from the trials - one of which was declared a mistrial due to the perjury of a witness - and exposes the twisted lives of youth living in a parallel universe where death is met with complicity.

Patenting Medical and Genetic Diagnostic Methods Nov 21 2021 'On the heels of his earlier work Medical Patent Law - The Challenges of Medical Treatment, Ventose makes another significant contribution to the literature. In his earlier work, he devoted a chapter to medical patents under US law. In Patenting Medical and Genetic Diagnostic Methods he expands that chapter into an entire text. No easy feat, to be sure. Nonetheless, his "treatment" of the jurisprudential terrain is sophisticated and rigorous. Scholars, practitioners and students seriously interested in the evolution of medical patents under US law will find Ventose's latest work to be invaluable.' - Emir Crowne, University of Windsor, Canada, Law Society of Upper Canada and Harold G. Fox Intellectual Property Moot 'This work provides a timely exploration of patent battles over biotechnology, medicine, diagnostic testing, and pharmacogenomics. Such conflicts are critically important at the dawn of a new era of personalised medicine.' - Matthew Rimmer, The Australian National University College of Law and ACIPA, Australia 'The debate on the patent eligibility of diagnostic and medical methods has raged recently in the United States and there seemed to be far less certainty about the outcome than in Europe. Gene patents for diagnostic methods clearly stirred the debate, but this is not a new debate. It goes back a century. This book gets to the bottom of the debate and provides an in depth insight, both of the history and of the recent developments. A fascinating tale. . . ' - Paul Torremans, University of Nottingham, UK This well-researched book explores in detail the issue of patenting medical and genetic diagnostic methods in the United States. It examines decisions of the Patent Office Boards of Appeal and the early courts on the question of whether medical treatments were eligible for patent protection under section 101 of the Patents Act. It then traces the legislative history of the Medical Procedures and Affordability Act that provided immunity for physicians from patent infringement suits. After considering the Supreme Court's jurisprudence on patent eligibility, the book then comprehensively sets out how the Federal Circuit and the Supreme Court have dealt with the issue, paying close attention to the Supreme Court's recent decision in Bilski and Prometheus. Being the first book to comprehensively cover patenting medical methods, it will appeal to patent agents, patent attorneys, solicitors and barristers working in patent and medical law worldwide, medical practitioners and healthcare professionals, in-house legal and regulatory departments of pharmaceutical companies. Researchers and managers in the chemical, medical, pharmaceutical and biotechnology industries, as well as academics specializing in medical law or patent law, will also find much to interest them in this book.

Investing in Youth Jun 16 2021 The Nova Scotia School-to-Work Transition (NSSWT) program was initiated to help position students so that they can move into the higher rather than the lower-end jobs once they complete their education. This report provides an overview of the program process followed, the outcomes, and the lessons learned. Chapter 1 reviews the program context: the state of employment and education in the province, federal and provincial programs to help youth, and NSSWT background and objectives. Chapter 2 describes the NSSWT program design and the similarities & differences among its six actual implementations around the province. Chapter 3 focuses on the program participants, describing their backgrounds, characteristics, hopes and aspirations at the program start, and differences between participants and a non-participant group selected as part of the program evaluation process. Chapter 4 documents program outcomes and assesses the extent to which program objectives were achieved. Participant outcomes are compared to those of the comparison group. Chapter 5 focuses on two other program partners, the employers or supervisors and the school. It discusses their expectations of the program and the ways they contributed to its functioning.
