Modern Methods of Construction Design Sep 07 2020 This book has been created on the basis of contributions to the 54th International Conference of Machine Design Departments that was held for the 60th anniversary of Technical University of Liberec. This international conference which follows a tradition going back more than 50 years is one of the longest-running series of conferences held in central Europe, dealing with methods and applications in machine design. The main aim of the conference was to provide an international forum where experts, researchers, engineers and industrial practitioners, managers and Ph.D. students could meet, share their experiences and present the results of their efforts in the broad field of machine design and related fields. The book has seven chapters which focus on new knowledge of machine design, optimization,

tribology, experimental methods and measuring, engineering analyses and product innovation. Authors presented new design methods of machine parts and more complex assemblies with the help of numerical methods such as FEM. Research, measurements and studies of new materials, including composites for energy-efficient constructions are also described. The book also includes solutions and results useful for optimization and innovation of complex design problems in various industries.

Active Tip-Over Prevention for Mobile Excavators Jun 04 2020 Hydraulic Excavators are subjected to tip-over situations with potential hazardous outcome. The given work analyses the state of the art of tip-over protection methods, including the current mandatory overload protection system. Using methods derived from the area of robotics, an algorithm for use as an assistance system was developed to predict and actively prevent dangerous tip-over situations. The developed method was evaluated in multi-body simulation models and in physical field tests.

Hydraulics in model building Aug 07 2020 Whether excavator or caterpillar, tipper, or wheel loader – in the original, all these commercial vehicles cannot do without hydraulics. In model building, alternatives are often used because hydraulics are considered complicated. But with a few basics, planning and building a model hydraulic system is not witchcraft. In this book, model hydraulics specialist Marcel Sigrist gives you the information you need to equip your model with functioning hydraulics. From the calculation of the required power and thus the necessary pump, the layout of lines and valves to the required safety devices, all relevant topics are addressed so that nothing stands in the way of successfully building a functioning model hydraulic system. A complete archive of technical drawings for the required components rounds off the book. From the content: • Possible applications of a model hydraulic system • Functionality of a hydraulic system • Basics of calculation • Do-it-yourself or buy? • Components of a hydraulic system • Pumps • Pipes • Connections and joints • Sealing of cylinders/valves • Types of cylinders • Oil tank • Building your own model hydraulics • Flow rate regulation via the RC control system • Automatic flow regulation (load sensing) for model hydraulics • Construction plan archive
