Acupuncture Logic Dec 18 2021 The information contained in this book, although familiar to many practitioners and students, is presented in a concise logistical format. This unique method of utilizing acupuncture treatment algorithms for differential diagnosis of disease states is logically systematic and useful both as an acupuncture treatment text and reference guide. The compilation of material is extracted from Chinese Acupuncture and Moxibustion, Foreign Language Press, Beijing. The disease states are listed alphabetically and are located at the top of the page. They are then subcategorized and differentiated according to their main manifestations. The acupuncture treatment points that are specific to the disease state are found next, followed by the tongue and pulse diagnosis. Located at the bottom of the page are acupuncture treatment points that are common to the various subdivisions of the disease states. It is often helpful to start at the bottom of the page, identifying common acupuncture treatment points to each subdivision (if there are any). This unique presentation of the material appears visually clear, uniform and easier to decipher and commit to memory. The appendix contains the disease states and acupuncture treatment points listed in a quick reference chart. This document will prove to be a valuable tool to both practitioner and student.

The Biological Action of Physical Medicine Oct 04 2020 The Biological Action of Physical Medicine: Controlling the Human Body's Information System challenges the contemporary way of thinking of diagnostics and therapy "from the outside." Drawing on 30 years of independent comprehensive research, this reference provides a universal and scientifically acceptable physiological theory, explaining the mode of action of methods of physical medicine as well as the underlying physiological mechanisms. Scientific research described in this book explains the universal neurophysiological foundation of all the respective methods, including organ electrodermal diagnostics (OED), thermotherapy (heat, cryostimulation), phototherapy (infrared, ultraviolet, laser), ultrasound therapy, electrotherapy (from transcutaneous electric nerve stimulation to electromagnetic field therapies), magnetotherapy, and mechanical nerve stimulation (acupuncture, reflexive massage, cupping, high-pressure hydrotherapy). A better understanding of physical medicine's modes of action not only insures better clinical results, but also illuminates pain mechanisms and our understanding of the functioning of the nervous system. Fully explains the important therapeutic modalities of genuine physical medicine as well as the underlying physiological mechanisms Shows how to access and control the diagnostic information circulating in the sensory nervous system

WHO Standard Acupuncture Point Locations in the Western Pacific Region Feb 20 2022 Acupuncture has been practiced for more than 2500 years in the Western Pacific region and has become a global therapeutic method in recent decades. However, it was reported that acupuncturists differed by up to 25% in the acupuncture points they used, raising doubts and uncertainty regarding the efficacy and safety of acupuncture treatment, as well as causing difficulties in the fields of acupuncture research and education. Member States therefore increasingly began to demand standardization in acupuncture point locations. Responding to this request, the WHO Western Pacific

Regional Office initiated a project to reach consensus on acupuncture point locations and thus convened 11 serial meetings resulting in these guidelines. This Standard acupuncture point locations in the Western Pacific Region stipulates the methodology for locating acupuncture points on the surface of the human body, as well as the locations of 361 acupuncture points. The Standard is applicable for teaching, research, clinical service, publication, and academic exchanges involving acupuncture.

Evidence-based Clinical Chinese Medicine - Volume 17: Colorectal Cancer Aug 22 2019 This seventeenth volume of the Evidence-based Clinical Chinese Medicine series aims to provide a multi-faceted 'whole evidence' analysis of the management of Colorectal Cancer in integrative Chinese medicine. Beginning with overviews of how colorectal cancer is conceptualised and managed in both conventional medicine and contemporary Chinese medicine, the authors then provide detailed analyses of how colorectal cancer and related disorders were treated with herbal medicine and acupuncture in past eras. In the subsequent chapters, the authors comprehensively review the current state of the clinical trial evidence for Chinese herbal medicines (Chapter 5), acupuncture (Chapter 7), other Chinese medicine therapies (Chapter 8) and combination Chinese medicine therapies (Chapter 9) in the management of colorectal cancer, as well as analyse and evaluate the results of these studies from an evidence-based medicine perspective. Chapter 6 provides a review and a summary of the experimental evidence for the bioactivity of commonly used Chinese herbs. The outcomes of these analyses are summarised and discussed in Chapter 10 which identifies implications for the clinical practice of Chinese medicine and for future research. This book can inform clinicians and students in the fields of integrative medicine and Chinese medicine regarding contemporary practice and the current evidence-base for a range of Chinese medicine therapies used in the management of colorectal cancer, including herbal formulas and acupuncture treatments, in order to assist clinicians in making evidence-based decisions in patient care.
