Thank you definitely much for downloading **New Directions In The Ethics Of Assisted Suicide And Euthanasia International Library Of Ethics Law And The**. Most likely you have knowledge that, people have look numerous period for their favorite books past this New Directions In The Ethics Of Assisted Suicide And Euthanasia International Library Of Ethics Law And The, but end occurring in harmful downloads.

Rather than enjoying a good ebook bearing in mind a cup of coffee in the afternoon, then again they juggled gone some harmful virus inside their computer. **New Directions In The Ethics Of Assisted Suicide And Euthanasia International Library Of Ethics Law And The** is to hand in our digital library an online admission to it is set as public suitably you can download it instantly. Our digital library saves in fused countries, allowing you to get the most less latency era to download any of our books following this one. Merely said, the New Directions In The Ethics Of Assisted Suicide And Euthanasia International Library Of Ethics Law And The is universally compatible in the manner of any devices to read.

Ethics in Medicine Aug 27 2019 This book both presents a succinct history of medical ethics and discusses a wide range of important ethical dilemmas in the provision of modern health care. A synopsis is provided of ethics through the ages and the role of ethics in the evolution of medicine. Principles and sources of medical ethics, as well as different religious and secular perspectives, are explained. Ethical concerns in relation to a variety of specific issues are then examined. These issues include, for example, human experimentation, stem cell research, assisted reproductive technologies, termination of pregnancy, rationing of health care, euthanasia, and quality of life issues. The author's many years of practicing medicine in different cultures and countries and his passion for theology works, philosophy, literature, poetry, history, and anthropology have informed and enriched the contents of this stimulating

book.

Methods in Medical Ethics Aug 08 2020 Twenty-four American specialists provide descriptions of techniques, critiques, and notes on resources and training on a variety of methods used in medical ethics. Individual chapters are devoted to each of 11 methods: philosophy, religion and theology, professional codes, legal methods, casuistry, history, qualitative, ethnographic, quantitative surveys, experimental methods, and economics and decision science. Discussion includes how these methods can relate to one another and how to assess the quality of scholarship in medical ethics in connection with such issues as physician-assisted suicide, euthanasia, and medical genetics. For scholars, teachers, editors and students in all disciplines contributing to the field. c. Book News Inc.

The Inevitable Aug 20 2021 “A remarkably nuanced, empathetic, and well-crafted work of journalism, [The Inevitable] explores what might be called the right-to-die underground, a world of people who wonder why a medical system that can do so much to try to extend their lives can do so little to help them end those lives in a peaceful and painless way.”—Brooke Jarvis, *The New Yorker* More states and countries are passing right-to-die laws that allow the sick and suffering to end their lives at pre-planned moments, with the help of physicians. But even where these laws exist, they leave many people behind. *The Inevitable* moves beyond margins of the law to the people who are meticulously planning their final hours—far from medical offices, legislative chambers, hospital ethics committees, and polite conversation. It also shines a light on the people who help them: loved ones and, sometimes, clandestine groups on the Internet that together form the “euthanasia underground.” Katie Engelhart, a veteran journalist, focuses on six people representing different aspects of the right to die debate. Two are doctors: a California physician who runs a boutique assisted death clinic and has written more lethal prescriptions than anyone else in the U.S.; an Australian named Philip Nitschke who lost his medical license for teaching people how to end their lives painlessly and peacefully at “DIY Death” workshops. The other four chapters belong to people who said they wanted to die because they were suffering unbearably—of old age, chronic illness, dementia, and mental anguish—and saw suicide as their only option. Spanning North America, Europe, and Australia, *The Inevitable* offers a deeply reported and fearless look at a morally tangled subject. It introduces readers to ordinary people who are fighting to find dignity and authenticity in the final hours of their lives.

Assisted Suicide Dec 12 2020

Assisted Suicide and Euthanasia Jan 25 2022 As medical technology advances and severely injured or ill people can be kept alive and functioning long beyond what was previously medically possible, the debate surrounding the ethics of end-of-life care and quality-of-life issues has grown more urgent. In this lucid and vigorous new book, Craig Paterson discusses assisted suicide and euthanasia from a fully fledged but non-dogmatic secular natural law perspective. He rehabilitates and revitalises the natural law approach to moral reasoning by developing a pluralistic account of just why we are required by practical rationality to respect and not violate key demands generated by the primary goods of persons, especially human life. Important issues that shape the moral quality of an action are explained and analysed: intention/foresight; action/omission; action/consequences; killing/letting die; innocence/non-innocence; and, person/non-person. Paterson defends the central normative proposition that 'it is always a serious moral wrong to intentionally kill an innocent human person, whether self or another, notwithstanding any further appeal to consequences or motive'.

Euthanasia and the Ethics of a Doctor's Decisions Apr 27 2022 Why do so many doctors have profound misgivings about the push to legalise euthanasia and assisted suicide? Ole Hartling uses his background as a physician, university professor and former chairman of the Danish Council of Ethics to introduce new elements into what can often be understood as an all too simple debate. Alive to the case that assisted dying can be driven by an unattainable yearning for control, Hartling concentrates on two

fundamental questions: whether the answer to suffering is to remove the sufferer, and whether self-determination in dying and death is an illusion. He draws on his own experience as a medical doctor to personalize the ethical arguments, share patients' narratives and make references to medical literature. Here is a sceptical stance towards euthanasia, one that is respectful to those who hold different opinions and well-informed about the details and nuances of different euthanasia practices. Written from a Scandinavian perspective, where respect for autonomy and high quality palliative care go hand in hand, Hartling's is a nuanced, valuable contribution to the arguments that surround a question doctors have faced since the birth of medicine. He shows us how the intentions of doing something good can sometimes lead to even greater dilemmas, opening us up to those situations where an inclination to end suffering by ending life is deeply conflicting both for the clinician and for any fellow human being.

Ethics, Law, and Society May 05 2020 This key collection brings together a selection of papers commissioned and published by the Cardiff Centre for Ethics, Law & Society. It incorporates contributions from a group of international experts along with a selection of short opinion pieces written in response to specific ethical issues. The collection addresses issues arising in biomedical and medical ethics ranging from assisted reproductive technologies to the role of clinical ethics committees. It examines broader societal issues with particular emphasis on sustainability and the environment and also focuses on issues of human rights in current global contexts. The contributors collect responses to issues arising from high profile cases such as the legitimacy of war in Iraq to physician-related suicide. The volume will provide a valuable resource for practitioners and academics with an interest in ethics across a range of disciplines.

Reproductive Ethics in Clinical Practice Jun 05 2020 Reproductive health care professionals in fields such as Obstetrics and Gynecology, Family Medicine, and Pediatrics face difficult ethical issues because they work at the crossroads of patient decision-making, scientific advancement, political controversy, legal regulation, and profound moral considerations. The dilemmas these professionals face expose big-picture bioethics questions of interest to everyone. Yet for clinicians striving to deliver excellent patient care, the ethical questions that make daily practice challenging can be just as nuanced. This volume presents a carefully curated compilation of essays written by leading experts in the fields of medicine, ethics, and law, who address key issues at the forefront of reproductive ethics. It is organized into three main sections: I. Contraception and Abortion Ethics - Preventing Pregnancy and Birth, II. Assisted Reproduction Ethics - Initiating Pregnancy, and III. Obstetric Ethics - Managing Pregnancy and Delivery. Each section begins with a short introduction by the editors providing an overview of the area and contextualizing the essays that follow. This volume's primary aim is to be useful to practicing clinicians, students, and trainees by providing short and practical essays covering urgent topics--from race, religion and abortion, to legal liability, violations of confidentiality and maternal choices that risk future children's health. This collection provides clinicians at all levels of training with frameworks they need to approach the intimate and high-stakes encounters central to their profession.

[Ethics and Economics of Assisted Reproduction](#) May 29 2022 For those who undergo it, infertility treatment is costly, time-consuming, invasive, and emotionally and physically arduous, yet technology remains the focus of most public discussion of the topic. Drawing on concepts from medical ethics, feminist theory, and Roman Catholic social teaching, Maura A. Ryan analyzes the economic, ethical, theological, and political dimensions of assisted reproduction. Taking seriously the experience of infertility as a crisis of the self, the spirit, and the body, Ryan argues for the place of reproductive technologies within a temperate, affordable, sustainable, and just health care system. She contends that only by ceasing to treat assisted reproduction as a consumer product can meaningful questions about medical appropriateness and social responsibility be raised. She places infertility treatments within broader commitments to the common good, thereby understanding reproductive rights as an inherently

social, rather than individual, issue. Arguing for some limits on access to reproductive technology, Ryan considers ways to assess the importance of assisted reproduction against other social and medical prerogatives and where to draw the line in promoting fertility. Finally, Ryan articulates the need for a compassionate spirituality within faith communities that will nurture those who are infertile.

New Directions in the Ethics of Assisted Suicide and Euthanasia Sep 01 2022 This book provides novel perspectives on the ethical justifiability of assisted dying. Seeking to go beyond traditional debates on topics such as the value of human life and questions surrounding intention and causation, this volume promises to shift the terrain of the ethical debates about assisted dying. It reconsiders the role of patient autonomy and paternalistic reasons as well as the part proposed for medical professionals and clinical ethics consultation in connection with assisted dying, relates the debate on assisted dying to questions about organ-donation and developments in medical technology, and demonstrates the significance of experimental philosophy in assessing questions of assisted dying. This book is ideal for advanced courses in bioethics and health care ethics.

Intending Death Oct 02 2022 At the cutting-edge of one of the most sensitive contemporary controversies, this anthology presents the most current thinking of experts in the field of the ethics of assisted suicide and euthanasia--exploring point blank issues that law and public policy have often skirted or wished away. Explores issues from three perspectives--philosophical, clinical and political, legal and economic.

Thorny Issues in Clinical Ethics Consultation Sep 08 2020 This book addresses new and evolving thorny issues in clinical ethics consultation. It is a book for our time. The contributors provide essential critical reflection on the standards and methods of training clinical ethics consultants as the field seeks to professionalize. This collection incorporates both North American and European experts, offering different perspectives on issues such as marginalized populations, the opioid epidemic, complex discharge, micro-managing families, and continually challenging issues at the end-of-life, such as determinations of brain death, physician-assisted death, and futility. The authors engage the complexities of choosing for others when making decisions for incapacitated adults and pediatric patients. This volume engages with the growing literature in these debates and offers new perspectives from both academics and practitioners. The readings are of particular interest to bioethicists, clinicians, ethics committees, and students in bioethics and beyond. These new essays advance discussions in the professionalization and certification of ethics consultants and offer crucial insights on new and evolving thorny issues in the practice of clinical ethics consultation.

Physician-Assisted Death Mar 27 2022 Physician-Assisted Death is the eleventh volume of Biomedical Ethics Reviews. We, the editors, are pleased with the response to the series over the years and, as a result, are happy to continue into a second decade with the same general purpose and zeal. As in the past, contributors to projected volumes have been asked to summarize the nature of the literature, the prevailing attitudes and arguments, and then to advance the discussion in some way by staking out and arguing forcefully for some basic position on the topic targeted for discussion. For the present volume on Physician-Assisted Death, we felt it wise to enlist the services of a guest editor, Dr. Gregg A. Kasting, a practicing physician with extensive clinical knowledge of the various problems and issues encountered in discussing physician assisted death. Dr. Kasting is also our student and just completing a graduate degree in philosophy with a specialty in biomedical ethics here at Georgia State University. Apart from a keen interest in the topic, Dr. Kasting has published good work in the area and has, in our opinion, done an excellent job in taking on the lion's share of editing this well-balanced and probing set of essays. We hope you will agree that this volume significantly advances the level of discussion on physician-assisted euthanasia. Incidentally, we wish to note that the essays in this volume were all finished and committed to press by January 1993.

Sedation, Suicide, and the Limits of Ethics Mar 15 2021 In this book, James Dunson explores end-of-life ethics including physician-assisted suicide and continuous sedation. He argues that ethical debates currently ignore the experience of the dying patient in an effort to focus on policy creation, and proposes that the dying experience should instead be prioritized and used to inform policy development.

Euthanasia, Ethics and Public Policy Jul 19 2021 A consideration of the 'slippery slope' objection to voluntary euthanasia, including a review of the Dutch experience.

The Right to Health Care: Ethical Considerations Jan 13 2021 This book provides an in-depth ethical analysis of the right to health care by contrasting privatized with socialized approaches. It pays special attention to how a socialized approach can be implemented in the context of limited resources and offers a way of integrating allocation decisions at the policy level with institutional and hands-on decision-making. It also discusses how the right to health care translates into duties on part of the members of society. In an Appendix, it suggests how, in time of need, the TRIPS Agreement allows countries to side-step patent regulations that would otherwise raise the cost of patented healthcare products beyond what a particular society is able to afford. The book is of interest not only to scholars but also to healthcare policy makers, administrators and healthcare professionals, as well as to patients themselves.

Health Care Ethics Sep 20 2021 This thorough revision of health care ethics brings the reader up to date on the most important issues in biomedical ethics today.

Ethics in Palliative Care Dec 24 2021 No specialty faces more diverse and challenging ethical dilemmas than palliative medicine. What is the best way to plan ahead for the end of life? How should physicians respond when patients refuse treatments likely to be beneficial, or demand treatments not likely to be? Who makes medical decisions for patients who are too ill to decide for themselves? Do patients have the "right to die" (and, if so, what exactly does that mean)? In this volume noted palliative care physician and bioethicist Robert C. Macauley addresses a broad range of issues from historical, legal, clinical, and ethical perspectives. Clinically nuanced and philosophically rigorous, *Ethics in Palliative Care* analyzes hot-button subjects like physician assisted dying and euthanasia, as well as often overlooked topics such as pediatric palliative care, organ donation, palliative care research, and moral distress. Drawing on real cases yet written in non-technical language, this complete guide will appeal to both medical professionals and lay readers.

Arguing Euthanasia Nov 22 2021 Essays discuss the legal and ethical issues related to physician-assisted suicide, the work of Dr. Jack Keivorkian, and lethal prescriptions for the terminally ill

Assisted Death Jul 31 2022 L.W. Sumner explores the ethical and legal status of physician-assisted suicide and euthanasia, and argues powerfully that these forms of assisted death can claim the same justification as other widely accepted end-of-life practices. He surveys the opposing views and legal precedents, and develops a model regulatory policy for assisted death.

Contemporary Catholic Health Care Ethics, Second Edition Nov 30 2019 *Contemporary Catholic Health Care Ethics, Second Edition*, integrates theology, methodology, and practical application into a detailed and practical examination of the bioethical issues that confront students, scholars, and practitioners. Noted bioethicists Gerard Magill, Henk ten Have, and David F. Kelly contribute diverse backgrounds and experience that inform the richness of new material covered in this second edition. The book is organized into three sections: theology (basic issues underlying Catholic thought), methodology (how Catholic theology approaches moral issues, including birth control), and applications to current issues. New chapters discuss controversial end-of-life issues such as forgoing treatment, killing versus allowing patients to die, ways to handle decisions for incompetent patients, advance directives, and physician-assisted suicide. Unlike anthologies, the coherent text offers a consistent method in order to provide students, scholars, and practitioners with an understanding of ethical dilemmas as well as concrete examples to assist in the difficult decisions they must make on an everyday basis.

Matters of Life and Death Jun 17 2021 Orentlicher uses controversial life-and-death issues as case studies for evaluating three models for translating principle into practice. Physician-assisted suicide illustrates the application of "generally valid rules," a model that provides predictability and simplicity and, more importantly, avoids the personal biases that influence case-by-case judgments. The author then takes up the debate over forcing pregnant women to accept treatments to save their fetuses. He uses this issue to weigh the "avoidance of perverse incentives," an approach to translation that follows principles hesitantly for fear of generating unintended results. And third, Orentlicher considers the denial of life-sustaining treatment on grounds of medical futility in his evaluation of the "tragic choices" model, which hides difficult life-and-death choices in order to prevent paralyzing social conflict.

Physician-Assisted Dying Apr 03 2020 In this volume, a distinguished group of physicians, ethicists, lawyers, and activists come together to present the case for the legalization of physician-assisted dying, for terminally ill patients who voluntarily request it. To counter the arguments and assumptions of those opposed to legalization of assisted suicide, the contributors examine ethical arguments concerning self-determination and the relief of suffering; analyze empirical data from Oregon and the Netherlands; describe their personal experiences as physicians, family members, and patients; assess the legal and ethical responsibilities of the physician; and discuss the role of pain, depression, faith, and dignity in this decision. Together, the essays in this volume present strong arguments for the ethical acceptance and legal recognition of the practice of physician-assisted dying as a last resort -- not as an alternative to excellent palliative care but as an important possibility for patients who seek it.

Impairment and Disability Oct 22 2021 This book explores legislation intended to protect the interests of people with disabilities or impairments. Considering a broad range of ethical and legal concerns which arise in issues of life, death and disability, it covers the social and legal responses to the equality rights of disabled people, focusing on those responses to: the right to life the end of life assisted suicide. This work engages with contemporary debates, examines case studies and explores the problems surrounding many legal concepts within the context of disability and impairment. The authors argue that it is crucial to distinguish between unjust discrimination and differential treatment and unify the disagreements surrounding the issues by highlighting ethical ideals that should be shared by all stakeholders in life and death decisions that impact on people with disabilities. Topical and contemporary, this book is a perfect supplementary text for students of all levels and researchers working in the areas of law, applied ethics and disability theory.

Ethical Decision Making Issues on Palliative Seduction Oct 10 2020 Polemic Paper from the year 2018 in the subject Medicine - Medical Frontiers and Special Areas, grade: 1, Egerton University, language: English, abstract: This paper will provide a critical analysis of palliative seduction, especially with regard to ethical decision making in physician-assisted suicide. It is evident that nurses play pivotal roles in the implementation of palliative seduction. Arevalo et al (2013) state "that nurses are important participants in the different phases of implementation of palliative sedation; starting with the day-to-day care of terminally ill patients and their relatives" (p. 618). Palliative seduction has become one of the most contentious ethical issues in the United States of America. Consequently, ethical decision making has also become one of the most challenging issues to baccalaureate prepared nurses and society at large. Nurses experience immense challenges while caring for patients in palliative care, especially in making end-of-life decisions. Fernandes and Moreira (2012) reaffirm the challenges faced by nurses in ethical decision making by stating that nurses "consider that end-of-life decisions, privacy, interaction between nurse/patient and/or family, team work, and access to care arise in their daily life" (p. 81). This is, probably the principal reason as to why current debate over whether palliative seduction in physician-assisted suicide should be legalized or not has evoked unprecedented controversy in the society. From a critical approach, the issue of palliative seduction has been complicated by the doctrine of double effect.

However, this doctrine does not have legal, empirical and ethical relevance.

Assisted Suicide: The Liberal, Humanist Case Against Legalization Apr 15 2021 This book presents an atheistic case against the legalization of assisted suicide. Critical of both sides of the argument, it questions the assumptions behind the discussion. Yuill shows that our attitudes towards suicide – not euthanasia – are most important to our attitudes towards assisted suicide.

The Ethics of Assisted Death Nov 03 2022 Are we ever justified in choosing to die by deliberate action? Is it ever right to aid those who request assistance in dying? These questions are widely debated today, and in this book, a nationally recognized authority in theology and ethics examines the major arguments for and against physician-assisted death. Writing from a religious perspective, Kenneth Cauthen presents explicit biblical and philosophical foundations for a cautious and reasoned case to change the current laws concerning physician-assisted suicide and physician-administered death.

Ethics In Clinical Practice Nov 10 2020 Ethics in Clinical Practice, Second Edition continues to focus on multidisciplinary medicine and how ethical dilemmas affect not only doctors and patients, but also nurses, social workers, members of ethics committees, hospital attorneys, administrators, and others. Greater attention is given to care in a variety of settings and across settings. Cases reflect the managed care phenomenon and cost containment, demographic changes, the electronic revolution, and the ethical dilemmas resulting from this new climate. The revised edition discusses advances in palliative medicine and its availability, and includes new data regarding attitudes and prevalence of physician-assisted suicide. Attention is given to how issues of cost containment might directly or indirectly influence patients' end-of-life treatment options. Cases are updated to include pertinent information about medical advances and legal developments, and how ethical analysis reflects these new developments.

Euthanasia and Assisted Suicide: Global Views on Choosing to End Life Jul 07 2020 This book addresses key historical, scientific, legal, and philosophical issues surrounding euthanasia and assisted suicide in the United States as well as in other countries and cultures. • Addresses the extended history of debates regarding the ethical justifiability of assisted suicide and euthanasia • Analyzes assisted suicide and euthanasia in many cultural, philosophical, and religious traditions • Provides an interdisciplinary perspective on the subject, including coverage of topics such as the depictions of assisted dying in popular culture, that enables a more complete understanding of the emotionally charged controversy surrounding this subject • Spotlights the latest medical and scientific developments in euthanasia and examines the role of technology in the ethical debates on assisted dying

Bioethics Feb 11 2021 The main strength of this book is that it examines the challenges facing the field of Bioethics today from medical, ethical and legal perspectives. A critical exchange of ideas from professionals in interdisciplinary fields allows everyone to learn and benefit from the insights gained through others' experiences. Examining, analyzing and understanding these complex medical-ethical-legal issues and cases and how they are resolved will serve as a paradigm for all professionals who will be confronted with these complex bioethical issues now and in the future. The more we face these challenges directly, examine them critically and debate them enthusiastically the more knowledge will be gained and hopefully, we will gain more practical wisdom.

Regulating how We Die Feb 23 2022 Dr. Linda Emanuel--one of America's most influential medical ethicists--has assembled leading experts to provide not only a clear account of the arguments for and against physician-assisted suicide and euthanasia but also historical, empirical, and legal perspectives on this complicated issue.

Medical Ethics Today Jan 31 2020 This is your source for authoritative and comprehensive guidance from the British Medical Association (BMA) Medical Ethics Department covering both routine and highly contentious medico-legal issues faced by health care professionals. The new edition updates the information from both the legal and ethical perspectives and reflects developments surrounding The

Mental Capacity Act, Human Tissue Act, and revision of the Human Fertilisation and Embryology Act.

Reports on End-of-life Care Jun 25 2019 Life and death ethics This compendium is a compilation of AMA Council Reports from 1987 to 1996 that investigate the ethical issues related to end-of-life care. Report topics include do-not-resuscitate orders, euthanasia, decisions near the end of life, physician-assisted suicide, and more. Analyses of current medical ethics issues are also included.

Biomedical Ethics Jan 01 2020 This best-selling anthology of readings with case studies provides insightful and comprehensive treatment of ethical issues in medicine. Appropriate for courses taught in philosophy departments as well as in schools on medicine and nursing, the collection covers provocative topics such as conflicts of interest in medicine, advance directives, physician-assisted suicide, and the rationing of health care. The effective pedagogical features include chapter introductions, argument sketches, explanations of medical terms, headnotes, and annotated bibliographies.

Physician-Assisted Suicide and Euthanasia Sep 28 2019 Unlike Nazi medical experiments, euthanasia during the Third Reich is barely studied or taught. Often, even asking whether euthanasia during the Third Reich is relevant to contemporary debates about physician-assisted suicide (PAS) and euthanasia is dismissed as inflammatory. *Physician-Assisted Suicide and Euthanasia: Before, During, and After the Holocaust* explores the history of euthanasia before and during the Third Reich in depth and demonstrate how Nazi physicians incorporated mainstream Western philosophy, eugenics, population medicine, prevention, and other medical ideas into their ideology. This book reveals that euthanasia was neither forced upon physicians nor wantonly practiced by a few fanatics, but widely embraced by Western medicine before being sanctioned by the Nazis. Contributors then reflect on the significance of this history for contemporary debates about PAS and euthanasia. While they take different views regarding these practices, almost all agree that there are continuities between the beliefs that the Nazis used to justify euthanasia and the ideology that undergirds present-day PAS and euthanasia. This conclusion leads our scholars to argue that the history of Nazi medicine should make society wary about legalizing PAS or euthanasia and urge caution where it has been legalized.

Euthanasia, Ethics and the Law May 17 2021 *Euthanasia, Ethics and the Law* argues that the law governing the ending of life in England and Wales is unclear, confused and often contradictory. The book shows that the rules are in competition because the ethical principles underlying the rules are also diverse and conflicting. In mounting his case Richard Huxtable considers some familiar and topical debates, including assisted suicide and voluntary euthanasia, examining such situations as the Dianne Pretty litigation and Lord Joffe's Assisted Dying for the Terminally Ill Bill. The book also enters some important, but less well-charted areas, looking at the advent of 'death tourism' and the real status of involuntary and passive euthanasia in English law, in addition to clarifying the confusion that surrounds the use of powerful painkillers like morphine. Dealing with both legal and ethical issues, the text concludes that the time has come to more openly adopt a compromise position - one that more honestly recognises and accommodates the competing values, whilst also restoring a measure of coherence to the law.

The Ethics of Surgery Oct 29 2019 Compendium of articles from recent surgical literature that address ethical issues chosen by surgeons.

Reproductive Ethics in Clinical Practice Mar 03 2020 "Like all clinicians, reproductive health care providers face specialty-specific ethical questions. However, the first editor of this book, Dr. Julie Chor (JC), has never found an ethics text that is tailored to the needs of practicing clinicians, students, and trainees in Reproductive Healthcare. This is an unfortunate gap in the literature, because whether reproductive health providers come from Obstetrics and Gynecology, Family Medicine, Pediatrics or another field, they all must be able to identify and analyze complex ethical issues that lie at the crossroads of patient decision-making, scientific advancement, political controversy, government

regulation, and profound moral considerations in the context of continually evolving medical, legal, and societal factors. To fill this gap, Dr. Chor invited co-editor Professor Katie Watson (KW) to partner in creating the text that she has always longed to use but has never found as an Obstetrician-Gynecologist practicing and teaching in this complex milieu"--

Ethics of Physician Assisted Suicide Jun 29 2022 Seminar paper from the year 2018 in the subject Medicine - Medical Frontiers and Special Areas, Egerton University, language: English, abstract: Physician assisted suicide has become one of the most contentious ethical issues in the United States of America. The current debate over whether euthanasia (physician-assisted suicide) should be legalized or not has evoked unprecedented controversy in the society because in this practice seems to encompass some ethical problems. Interestingly, physician-assisted suicide seem to have been used as a useful medical approach over a long time, even before the emergence of the controversial debate that seems to be assuming divergent directions day-by-day. It is also amusing to learn that those who are involved in the physician-assisted debate are not the beneficiaries of the practice. Initially, the precepts of the physician-assisted suicide imply that a terminally ill individual can request for a painless termination of his or her life, solely out of the individual's wishes. In addition, relatives to the ailing individual can request for the termination of the life of their loved one to avoid unnecessary agony and suffering. Moreover, the decision to terminate the life of a terminally ill individual can be made by the physicians depending with the severity of the disease condition. All these precepts agree with the terms of euthanasia, which defines it as "easy death" according to the Greeks who called it euthanatos. Physician-assisted suicide issue has turned out to be an ethical dilemma among the U.S population because; there is no universal explanation which is provided by the popularly known normative theories. These theories address the issue of physician-assisted suicide from diverse perspectives, leading to the observed ethical conflict. The other aspect of the physician-assisted suicide lies within the medical ethics. Physicians seem to be tied up by the medical ethics especially through the Hippocratic Oath, and yet they are ought to facilitate the practice. Therefore, this critical paper discusses euthanasia and its ethics.

Code of Ethics for Nurses with Interpretive Statements Jul 27 2019 Pamphlet is a succinct statement of the ethical obligations and duties of individuals who enter the nursing profession, the profession's nonnegotiable ethical standard, and an expression of nursing's own understanding of its commitment to society. Provides a framework for nurses to use in ethical analysis and decision-making.
