Electrical Transients in Power Systems Jan 31 2020 The principles of the First Edition--to teach students and engineers the fundamentals of electrical transients and equip them with the skills to recognize and solve transient problems in power networks and components--also guide this Second Edition. While the text continues to stress the physical aspects of the phenomena involved in these problems, it also broadens and updates the computational treatment of transients. Necessarily, two new chapters address the subject of modeling and models for most types of equipment are discussed. The adequacy of the models, their validation and the relationship between model and the physical entity it represents are also examined. There are now chapters devoted entirely to isolation coordination and protection, reflecting the revolution that metal oxide surge arresters have caused in the power industry. Features additional and more complete illustrative material--figures, diagrams and worked examples. An entirely new chapter of case studies demonstrates modeling and computational techniques as they have been applied by engineers to specific problems.

**Social Work in Europe** Jul 19 2021 It is an acknowledged if not accepted fact that all European societies are being fundamentally transformed, and indeed perceptively unsettled, by increased migrations across nations and by the asserted presence of established minorities within their borders. The scale and speed at which these transformations have taken place have brought in their wake considerable social impacts and no small measure of fear and anxiety. Encounters with such diversity are part and parcel of the social work task, and learning how to negotiate them should be a de facto aspect of the training and continuous professional development of social workers and other social professions. However, the moral and political dimensions of the role, scope and nature of the social work task in responding appropriately to these changed and changing realities are rather more contested. This volume addresses many dimensions of the response to issues of race and ethnicity in social work practice in Europe. It extends the debates on inter-cultural and race equality practice in social work through a stimulating and innovative collection of contributions. This book was originally published as a special issue of the European Journal of Social Work.

Tackling Bullying in Your School Feb 23 2022 This comprehensive collection of essays provides a series of highly practical guidelines which schools can implement themselves. Step-by-step advice is given on developing a whole-school policy which is generally seen as the essential nucleus of effective action. The book also suggests methods for tackling bullying through classroom and curriculum activities, including video, drama, and the use of quality circles and of working with pupils involved in bullying situations. Emphasis is placed on assertiveness training for pupils who may be bullied, and non-punitive work with pupils who bully others. As the majority of bullying takes place in playgrounds, the book includes innovative sections on training lunchtime supervisors, enhancing playground activities, and improving the playground environment.

Mouse Models of Cancer Oct 10 2020 Too often both composition teachers and their students experience knowledge and authority as lying outside their rhetorical interactions with others. Drawing on feminist, cultural, and poststructuralist theory, as well as work in the rhetorical tradition and composition studies, Hill offers less debilitating methods of thinking that teachers can model for their students. Richly illustrated with examples of classroom interactions and student work, the book also shows teachers how to enrich their own intellectual and political lives within the academy.

*Goal-based Reasoning for Argumentation* Nov 03 2022 This book provides an argumentation model for means end-reasoning, a distinctive type of reasoning used for problem-solving and decision-making. Means end-reasoning is modelled as goal-directed argumentation from an agent's goals and known circumstances, and from an action selected as a means, to a decision to carry out the action. Goal-based Reasoning for

Argumentation provides an argumentation model of this kind of reasoning showing how it is employed in settings of intelligent deliberation where agents try to collectively arrive at a conclusion on what they should do to move forward in a set of circumstances. The book explains how this argumentation model can help build more realistic computational systems of deliberation and decision-making, and shows how such systems can be applied to solve problems posed by goal-based reasoning in numerous fields, from social psychology and sociology, to law, political science, anthropology, cognitive science, artificial intelligence, multi-agent systems, and robotics.

*System Dynamics and Control* May 05 2020 This applied and comprehensive book combines topical coverage of both System Dynamics and Automatic Controls in one text, resulting in a pedagogically sound presentation of both subjects that can be used in this standard two-course sequence. It is thorough and complete, with, according to one reviewer, a "tremendous number of interesting practice problems covering a broad range of areas, giving the instructor significant choice and flexibility" in teaching the material. The book also has a wealth of worked-out, real-world examples, with every step clearly shown and explained. Cumulative examples that build through succeeding chapters demonstrate the stages of system modeling, from initial steps - which include the important but often omitted physical modeling process - through mathematical analysis to design realization. The result is a new and unified presentation of system dynamics and control, founded on a wide range of systems (mechanical, electrical, electromechanical - including MEMS, fluid, thermal, and chemical), with a common state-space approach.

Beyond the American Pale Nov 10 2020 Convention has it that Irish immigrants in the nineteenth century confined themselves mainly to industrial cities of the East and Midwest. The truth is that Irish Catholics went everywhere in America and often had as much of a presence in the West as in the East. In *Beyond the American Pale*, David M. Emmons examines this multifaceted experience of westering Irish and, in doing so, offers a fresh and discerning account of America's westward expansion. "Irish in the West" is not a historical contradiction, but it is — and was — a historical problem. Irish Catholics were not supposed to be in the West—that was where Protestant Americans went to reinvent themselves. For many of the same reasons that the spread of southern slavery was thought to profane the West, a Catholic presence there was thought to contradict it — to contradict America's Protestant individualism and freedom. The Catholic Irish were condemned as the clannish, backward remnants of an old cultural world that Americans self-consciously sought to leave behind. The sons and daughters of Erin were not assimilated, and because they were not assimilable, they should be kept beyond the American pale. As Emmons amply demonstrates, however, western reality was far more complicated. Irish Catholicism may have outraged Protestant-inspired American republicanism, but Irish Catholics were a necessary component of America's equally Protestant-inspired foray into industrial capitalism. They were also necessary to the successive conquests of the "frontier," wherever it might be found. It was the Irish who helped build the railroads, dig the hard rocks, man the army posts, and do the other arduous, dangerous, and unattractive toiling required by an industrializing society. With vigor and panache, Emmons describes how the West was not so much won as continually contested and reshaped. He probes the self-fulfilling mythology of the American West, along with the far different mythology of the Irish pioneers. The product of three decades of research and thought, *Beyond the American Pale* is a masterful yet accessible recasting of American history, the culminating work of a singular thinker willing to take a wholly new perspective on the past.
