The Onlife Manifesto Oct 10 2020 What is the impact of information and communication technologies (ICTs) on the human condition? In order to address this question, in 2012 the European Commission organized a research

project entitled The Onlife Initiative: concept reengineering for rethinking societal concerns in the digital transition. This volume collects the work of the Onlife Initiative. It explores how the development and widespread use of ICTs have a radical impact on the human condition. ICTs are not mere tools but rather social forces that are increasingly affecting our self-conception (who we are), our mutual interactions (how we socialise); our conception of reality (our metaphysics); and our interactions with reality (our agency). In each case, ICTs have a huge ethical, legal, and political significance, yet one with which we have begun to come to terms only recently. The impact exercised by ICTs is due to at least four major transformations: the blurring of the distinction between reality and virtuality; the blurring of the distinction between human, machine and nature; the reversal from information scarcity to information abundance; and the shift from the primacy of stand-alone things, properties, and binary relations, to the primacy of interactions, processes and networks. Such transformations are testing the foundations of our conceptual frameworks. Our current conceptual toolbox is no longer fitted to address new ICT-related challenges. This is not only a problem in itself. It is also a risk, because the lack of a clear understanding of our present time may easily lead to negative projections about the future. The goal of The Manifesto, and of the whole book that contextualises, is therefore that of contributing to the update of our philosophy. It is a constructive goal. The book is meant to be a positive contribution to rethinking the philosophy on which policies are built in a hyperconnected world, so that we may have a better chance of understanding our ICT-related problems and solving them satisfactorily. The Manifesto launches an open debate on the impacts of ICTs on public spaces, politics and societal expectations toward policymaking in the Digital Agenda for Europe's remit. More broadly, it helps start a reflection on the way in which a hyperconnected world calls for rethinking the referential frameworks on which policies are built.

The Power in a Link Nov 03 2022 Make your LinkedIn account work for you and your business LinkedIn is not just another social media tool. It's the world's largest professional

online network, with over 120 million users in over two hundred countries. The Power in a Link shows you how to employ this remarkable yet misunderstood resource to execute networking strategies and processes for your business, secure deals, and use (not abuse) your existing relationships. Author David Gowel, the man the Boston Globe has called the "LinkedIn Jedi," delivers the understanding necessary to map networks, stimulate word of mouth, and leverage unparalleled business intelligence to close deals. Arguing that LinkedIn is not social media at all, but instead belongs in a category all of its own, the book cuts through the noise in the crowded social media world with practical applications and explains why all professionals should embrace it in order to achieve success faster through relationships. This book: Advises readers how to spur effective network growth by projecting the right message online Demonstrates how to build and enhance readers' online presence Shows readers how to seek targeted introductions to the connections that matter most Explains why LinkedIn has been misunderstood and therefore misused by many users as well as how to correct past LinkedIn mistakes Partly conceptual, partly autobiographical, and partly technical, The Power in a Link includes success stories from Gowel and other professionals that demonstrate the effectiveness of his techniques.

2014 International Conference on Computer, Network Feb 11 2021 The objective of the 2014 International Conference on Computer, Network Security and Communication Engineering (CNSCE2014) is to provide a platform for all researchers in the field of Computer, Network Security and Communication Engineering to share the most advanced knowledge from both academic and industrial world, to communicate with each other about their experience and most up-to-date research achievements, and to discuss issues and future prospects in these fields. As an international conference mixed with academia and industry, CNSCE2014 provides attendees not only the free exchange of ideas and challenges faced by these two key stakeholders and encourage future collaboration between members of these groups but also a good opportunity to make friends with scholars around the world. As the first session of the international conference on CNSCE, it covers

topics related to Computer, Network Security and Communication Engineering. CNSCE2014 has attracted many scholars, researchers and practitioners in these fields from various countries. They take this chance to get together, sharing their latest research achievements with each other. It has also achieved great success by its unique characteristics and strong academic atmosphere as well as its authority.

Nonlinear Computational Geometry Jan 31 2020

An original motivation for algebraic geometry was to understand curves and surfaces in three dimensions. Recent theoretical and technological advances in areas such as robotics, computer vision, computer-aided geometric design and molecular biology, together with the increased availability of computational resources, have brought these original questions once more into the forefront of research. One particular challenge is to combine applicable methods from algebraic geometry with proven techniques from piecewise-linear computational geometry (such as Voronoi diagrams and hyperplane arrangements) to develop tools for treating curved objects. These research efforts may be summarized under the term nonlinear computational geometry. This volume grew out of an IMA workshop on Nonlinear Computational Geometry in May/June 2007 (organized by I.Z. Emiris, R. Goldman, F. Sottile, T. Theobald) which gathered leading experts in this emerging field. The research and expository articles in the volume are intended to provide an overview of nonlinear computational geometry. Since the topic involves computational geometry,

algebraic geometry, and geometric modeling, the volume has contributions from all of these areas. By addressing a broad range of issues from purely theoretical and algorithmic problems, to implementation and practical applications this volume conveys the spirit of the IMA workshop.

A Link to Royalty and Other Reflections Dec 24 2021 Fifty years ago in Saudi Arabia, the king and many loyal princes favored maintaining the autocratic political system. But one of the king's brothers, Prince Tatal, wished to instigate a peaceful political reform. In this compilation of personal reflections, the prince's former personal secretary shares a fascinating glimpse into the lifestyle of His Royal Highness Prince Tatal as he dares to question the political direction of his beloved country. John Sbaiti became personal secretary to the "Red Prince" at the peak of his political ambitions, staying with him for two years. Although the prince failed in his mission and eventually received a royal expulsion from the kingdom, Sbaiti reveals intriguing details of the prince's daily life as he and his entourage valiantly fought for revolutionary reform. Sbaiti leads others on an exciting journey that begins with his acceptance

of the job and continues through his adventures and European travels with Saudi royal personages as he immerses himself in the prince's routine and passionate mission. *A Link to Royalty and Other Reflections* offers a captivating look into the personal preferences and living style of a Saudi Royal Prince determined to lead his kingdom out of the dark ages and into a new era.

A Holistic Solution for Smart Grids based on LINK- Paradigm May 29 2022

This book presents a holistic solution for Smart Grids that includes the electricity: producers, electricity storages, grids, market and customer plants. The authors have derived the architectural paradigm

for Smart Grids LINK from the signature of their fractal structure. The presented LINK-based holistic architecture enables the large-scale integration of distributed energy resources by minimising the data to be exchanged, thus considering privacy and cyber security by design. The straightforwardness of LINK-Solution is related to its standardised structures, enabling the coupling of energy and non-energy sectors and Energy Communities. The Volt/var chain control as one of the most challenging operation processes of Smart Grids is covered in detail in this edition. Chapter by chapter, the reader is smoothly introduced to this unique solution, facilitating its practical implementation. This book is a valuable resource for experts, consultants, engineers, scientists, and students in the Smart Grids area and actors of the electricity market and politicians.
