**Geocomputation with R** Jan 19 2022 Geocomputation with R is for people who want to analyze, visualize and model geographic data with open source software. It is based on R, a statistical programming language that has powerful data processing, visualization, and geospatial capabilities. The book equips you with the knowledge and skills to tackle a wide range of issues manifested in geographic data, including those with scientific, societal, and environmental implications. This book will interest people from many backgrounds, especially Geographic Information Systems (GIS) users interested in applying their domain-specific knowledge in a powerful open source language for data science, and R users interested in extending their skills to handle spatial data. The book is divided into three parts: (I) Foundations, aimed at getting you up-to-speed with geographic data in R, (II) extensions, which covers advanced techniques, and (III) applications to real-world problems. The chapters cover progressively more advanced topics, with early chapters providing strong foundations on which the later chapters build. Part I describes the nature of spatial datasets in R and methods for manipulating them. It also covers geographic data import/export and transforming coordinate reference systems. Part II represents methods that build on these foundations. It covers advanced map making (including web mapping), "bridges" to GIS, sharing reproducible code, and how to do cross-validation in the presence of spatial autocorrelation. Part III applies the knowledge gained to tackle real-world problems, including representing and modeling transport systems, finding optimal locations for stores or services, and ecological modeling. Exercises at the end of each chapter give you the skills needed to tackle a range of geospatial problems. Solutions for each chapter and supplementary materials providing extended examples are available at <https://geocompr.github.io/geocompkg/articles/>. Dr. Robin Lovelace is a University Academic Fellow at the University of Leeds, where he has taught R for geographic research over many years, with a focus on transport systems. Dr. Jakub Nowosad is an Assistant Professor in the Department of Geoinformation at the Adam Mickiewicz University in Poznan, where his focus is on the analysis of large datasets to understand environmental processes. Dr. Jannes Muenchow is a Postdoctoral Researcher in the GIScience Department at the University of Jena, where he develops and teaches a range of geographic methods, with a focus on ecological modeling, statistical geocomputing, and predictive mapping. All three are active developers and work on a number of R packages, including *splanr*, *sabre*, and *RQGIS*.

Animals in Translation Mar 21 2022 With unique personal insight, experience, and hard science, *Animals in Translations* is the definitive, groundbreaking work on animal behavior and psychology. Temple Grandin's professional training as an animal scientist and her history as a person with autism have given her a perspective like that of no other expert in the field of animal science. Grandin and coauthor Catherine Johnson present their powerful theory that autistic people can often think the way animals think—putting autistic people in the perfect position to translate “animal talk.” Exploring animal pain, fear, aggression, love, friendship, communication, learning, and even animal genius, Grandin is a faithful guide into their world. *Animals in Translation* reveals that animals are much smarter than anyone ever imagined, and Grandin, standing at the intersection of autism and animals, offers unparalleled observations and extraordinary ideas about both.

**Using the concepts of reliability and validity, critically examine how confident Human Resource professionals should be in using interviews as an effective selection technique** Oct 16 2021 Essay from the year 2002 in the subject Business economics - Personnel and Organisation, grade: 15 of 20, University of St Andrews (Management Department), course: Human Resource management, 23 entries in the bibliography, language: English, abstract: Using the concepts of reliability and validity, critically examine how confident Human Resource professionals should be in using interviews as an effective selection technique. Interviews are the most common selection technique for recruiting. Notwithstanding, this method has been frequently criticised. It is the task of this essay to evaluate how valid and reliable they are. Therefore, firstly validity and reliability have to be defined to form a basis to start with. Secondly, different types of interviews, beginning with the traditional type, will be presented and analysed. Thirdly, attempts to standardise and improve the interview in terms of reliability and validity will be critically examined. Finally a short outlook will be given, to show that not everything can be related to be reliable and valid. This text will analyse only selection interviews as the topic refers mainly to these. Furthermore it will only deal with personal interviews of employees, which excludes, for example, telephone screening<sup>1</sup>. Every selection method has weaknesses and therefore it will become clear that interviews are not absolutely valid and reliable, but nevertheless to fill certain vacant positions they will be still irreplaceable. Reliability and Validity are the two key characteristics that interviews have to have to be a suitable method for selection. They measure if the chosen methods provide consistent results and if they adequately measure the characteristic they are looking at<sup>2</sup>. “Reliability means that the selection methods, tests and ensuing results are consistent and do not vary with time, place or different subjects”<sup>3</sup>. Or as Cowling puts it: “Reliability is a measure of the consistency with which a predictor continues to predict performance with the same degree of success”<sup>4</sup>. That means that, for instance, two interviews at a different time and place, with different interviewers and questions but under otherwise same conditions and with the same applicants will bring the same result; namely the best candidate should still be the best and the interviewees who failed should still fail<sup>5</sup>. It is also possible to maintain the conditions, the applicants and the structure but to change the other parameters of the assessment.

**Community in the Digital Age** Apr 29 2020 Is the Internet the key to a reinvigorated public life? Or will it fragment society by enabling citizens to associate only with like-minded others? Online community has provided social researchers with insights into our evolving social life. As suburbanization and the breakdown of the extended family and neighborhood isolate individuals more and more, the Internet appears as a possible source for reconnection. Are virtual communities 'real' enough to support the kind of personal commitment and growth we associate with community life, or are they fragile and ultimately unsatisfying substitutes for human interaction? Community in the Digital Age features the latest, most challenging work in an important and fast-changing field, providing a forum for some of the leading North American social scientists and philosophers concerned with the social and political implications of this new technology. Their provocative arguments touch on all sides of the debate surrounding the Internet, community, and democracy.

*The Privileges and Immunities of International Organizations in Domestic Courts* Aug 02 2020

International organizations are increasingly operating across borders and engaging in legal transactions in virtually all jurisdictions. This makes, familiarity with the applicable law and practice imperative for both international organizations and those who engage in legal relations with them. Furthermore, the issue of whether, how, and to what extent domestic courts take into account decisions of foreign and international courts and tribunals in their own decision-making has become increasingly important in recent years. This book provides a comprehensive empirical study of this transnational judicial dialogue, focusing on the law and practice of domestic jurisdictions concerning the legal personality, privileges, and immunities of international organizations. It presents a selection of detailed country-by-country studies, examining the manner of judicial dialogue across domestic jurisdictions, and between national and international courts. The approach taken in this book intersects with three highly topical areas of international legal scholarship: the rapidly evolving law of international institutions; the burgeoning research into the role of domestic courts in the international legal system; and the recent rise of empirically-oriented legal scholarship. Utilizing OUP's International Law in Domestic Courts database, the book presents analysis of little-known cases which have real international significance, illustrating the impact and extent of transnational judicial dialogue in the international legal system. The book provides important perspectives on the evolution and status of the law of immunity of international organizations, and contributes to the understanding of relationships between national courts, and between national and international courts.
