Tropical Dry Forests in the Americas Sep 22 2021 Under threat from natural and human disturbance, tropical dry forests are the most endangered ecosystem in the tropics, yet they rarely receive the scientific or conservation attention they deserve. In a comprehensive overview, *Tropical Dry Forests in the Americas: Ecology, Conservation, and Management* examines new approaches for data sampling and analysis using remote sensing technology, discusses new ecological and econometric methods, and critically evaluates the socio-economic pressures that these forest are facing at the continental and national levels. The book includes studies from Mexico, Costa Rica, Colombia, Venezuela, and Brazil that provide in-depth knowledge about the function, status, and conservation efforts of these endangered forests. It presents key elements of synthesis from standardized work conducted across all sites. This unique contribution provides new light in terms of these forests compared to each other not only from an ecological perspective but also in terms of the pressures that they are facing, and their respective responses. Written by experts from a diversity of fields, this reference brings together the many facets of function, use, heritage, and future potential of these forests. It presents an important and exciting synthesis of many years of work across countries, disciplines, and cultures. By standardizing approaches

for data sampling and analysis, the book gives readers comparison information that cannot be found anywhere else given the high level of disparity that exists in the current literature.

The Sea Shell Islands Apr 05 2020 "Juan Ponce de Leon officially discovered the Sea Shell Islands, Sanibel and Captiva, in 1513 when he turned landward on the Gulf Coast of Florida and sailed south 'as far as some islands that make out to sea.' An abundant food supply attracted Indians before the Age of Discovery and their gold, gleaned from shipwrecks, brought the Spanish conquistadores, Slavers, pirates, marauding Seminoles -- all were part of the colorful, often tempestuous, history of these islands, now famous for sea shells. Mrs. Dormer's descriptions are informative and always lively, whether she's discussing and re-creating the accidental discovery of Sanibel and Captiva, making conjectures about a possible earlier visit by Amerigo Vespucci, or delving into the personal histories of some of the first permanent settlers on the two tiny isles. She makes it clear why such personages as Thomas A. Edison, Theodore Roosevelt and Edna St. Vincent Millay were drawn there as well. The present also is very real in The Sea Shell Islands as Islanders fight to keep the charms of another era against the almost insurmountable odds of explosive growth."--Publisher's description.

Caribbean Rim Feb 25 2022 Murder, sunken treasure, and pirates both ancient and modern send Doc Ford on a nightmare quest in this New York Times bestseller in Randy Wayne White's thrilling series. Marine biologist Doc Ford has been known to help his friends out of jams occasionally, but he's never faced a situation like this. His old pal Carl Fitzpatrick has been chasing sunken wrecks most of his life, but now he's run afoul of the Florida Division of Historical Resources. Its director, Leonard Nickelby, despises amateur archaeologists, which is bad enough, but now he and his young "assistant" have disappeared--along with Fitzpatrick's impounded cache of rare Spanish coins and the list of uncharted wreck sites Fitz spent decades putting together. Some of Fitz's own explorations have been a little...dicey, so he can't go to the authorities. Doc is his only hope. But greed makes people do terrible things: rob, cheat, even kill. With stakes this high, there's no way the thieves will go quietly--and Doc's just put himself in their crosshairs.

The Gun Show Aug 10 2020 In *The Gun Show*, award-winning playwright E. M. Lewis tells the story of America's relationship with guns through the prism of her own personal experiences. From a farming community in rural Oregon to the big cities of Los Angeles and New York, an actor shares Ms. Lewis's unique perspective and true stories about America's most dangerous pastime as if they were his or her own, with brutal honesty and poignant humor. Leaning neither right nor left, *The Gun Show* jumps into the middle of the gun control debate and asks, "Can we have a conversation about this?" The solo version of the play requires only a single actor. The role was conceived for a man to play, but you may cast a woman or non-binary actor in this role if desired. In the duo version of the play, the actual playwright – E. M. Lewis – sits out in the audience, and the actor playing the Playwright occasionally interacts with her, as indicated in the script. (The duo version of the play is only available for licensing by special request, depending upon the availability of Ms. Lewis to participate.)

Facing Fear Jun 07 2020 A practical guide to overcoming fear from the daredevil who has walked on a tightrope across Times Square and the Grand Canyon. Nik Wallenda is a seventh-generation member of the Flying Wallendas, a circus family known for performing dangerous feats without safety nets. Nik is

known for his daring televised tightrope walks over Niagara Falls, the Grand Canyon, Times Square, and an active volcano. Nik has been walking the wire since he took his first steps, but he had never experienced fear until a tragic accident in 2017. The eight-person pyramid he and several members of his family were practicing collapsed, and five of its members fell thirty feet to the ground. While severely injured, they all survived miraculously, but the accident changed Nik's life forever. For the first time he felt overwhelming fear, and Nik had to find it in himself to move on, release the past, and get back out on the wire. Most of us will never walk a tightrope, but we face things that scare us every day. Whether putting ourselves out there socially or seeking a dream job, all of us allow anxieties and fears to hold us back. In *Facing Fear*, you will: Discover how to overcome lifelong areas of personal fear Understand the importance of dealing with trauma to fully heal and move forward Gain the determination to pick yourself up, grow in faith, and purposely walk toward success one step at a time *Facing Fear* weaves parts of Nik's personal story of the accident and how he conquered his fear with practical advice to help you overcome whatever fears are holding you back. This practical book will help you step out in faith and trust that God will hold you steady, even when you're afraid.

Spirals in Time Oct 24 2021 Seashells are the sculpted homes of a remarkable group of animals: the molluscs. These are some of the most ancient and successful animals on the planet. But watch out. Some molluscs can kill you if you eat them. Some will kill you if you stand too close. That hasn't stopped people using shells in many ways over thousands of years. They became the first jewelry and oldest currencies; they've been used as potent symbols of sex and death, prestige and war, not to mention a nutritious (and tasty) source of food. *Spirals in Time* is an exuberant aquatic romp, revealing amazing tales of these undersea marvels. Helen Scales leads us on a journey into their realm, as she goes in search of everything from snails that 'fly' underwater on tiny wings to octopuses accused of stealing shells and giant mussels with golden beards that were supposedly the source of Jason's golden fleece, and learns how shells have been exchanged for human lives, tapped for mind-bending drugs and inspired advances in medical technology. Weaving through these stories are the remarkable animals that build them, creatures with fascinating tales to tell, a myriad of spiralling shells following just a few simple rules of mathematics and evolution. Shells are also bellwethers of our impact on the natural world. Some species have been overfished, others poisoned by polluted seas; perhaps most worryingly of all, molluscs are expected to fall victim to ocean acidification, a side-effect of climate change that may soon cause shells to simply melt away. But rather than dwelling on what we risk losing, *Spirals in Time* urges you to ponder how seashells can reconnect us with nature, and heal the rift between ourselves and the living world.

The Tropical Deciduous Forest of Alamos Nov 24 2021 Only a day's drive south of the U.S.-Mexico border, a tropical deciduous forest opens up a world of exotic trees and birds that most people associate with tropical forests of more southerly latitudes. Like many such forests around the world, this diverse ecosystem is highly threatened, especially by large-scale agricultural interests that are razing it in order to plant grass for cattle. This book introduces the tropical deciduous forest of the Alamos region of Sonora, describing its biodiversity and the current threats to its existence. The book's contributors present the most up-to-date scientific knowledge of this threatened ecosystem. They review the natural history and ecology of its flora and fauna and explore how native peoples use the forest's many resources. Included in the book's coverage is a comprehensive plant list for the R'o Cuchujaqui area that well illustrates the diversity of the forest. Other contributions examine tree species used by Mayo Indians and the numerous varieties of domesticated plants that have been developed over the centuries by the Mayos and other indigenous peoples. Also examined are the diversity and distribution of reptiles, amphibians, mammals, and birds in the region. *The Tropical Deciduous Forest of Alamos* provides critical information about a globally important biome. It complements other studies of similar forests and allows a better understanding of a diverse but vanishing ecosystem.

Peace Child Jul 21 2021 From Cannibals to Christ-Followers--A True Story In 1962, Don and Carol Richardson risked their lives to share the gospel with the Sawi people of New Guinea. Peace Child tells their unforgettable story of living among these headhunters and cannibals, who valued treachery through fattening victims with friendship before the slaughter. God gave Don and Carol the key to the Sawi hearts via a redemptive analogy from their own mythology. The "peace child" became the secret to unlocking a value system that had existed through generations. This analogy became a stepping-stone by which the gospel came into the Sawi culture and started both a spiritual and a social revolution from within. With an epilogue updating how the gospel has impacted the Sawi people, this missionary classic will inspire a new generation of readers who need to hear this remarkable story and the lessons it teaches us about communicating Christ in a meaningful way to those around us.

Zoologies Dec 14 2020 "Beautifully written essays" on animals, "the real and mythological, the ordinary and the exotic, the wild and the domesticated" (Publishers Weekly). Humans were surrounded by other animals from the beginning of time: they were food, clothes, adversaries, companions, jokes, and gods. And yet, our companions in evolution are leaving the world—both as physical beings and spiritual symbols—and not returning. In this collection of linked essays, Alison Hawthorne Deming examines what the disappearance of animals means for human imagination and existence. Moving from mammoth hunts to dying house cats, she explores profound questions about what it means to be animal. What is inherent in animals that both leads us to destroy and leads us toward peace? As human animals, how does art both define us as a species and how does it emerge primarily from our relationship with other species? The reader emerges with a transformed sense of how the living world around us has defined and continues to define us in a powerful way. "Beautifully written essays on animal and human behavior and biology . . . highly recommended for lovers of words and nature." —Publishers Weekly "Human beings live in an age in which industrialization and mass extinction are facts of life. But as Deming suggests in this collection, the more people denude the planet of animals, the more diminished they become in spirit . . . Eloquent, sensitive and astute." —Kirkus Reviews "Serpentine intellect and wry humor." —Booklist

Sex, Drugs, and Sea Slime Aug 29 2019 When viewed from a quiet beach, the ocean, with its rolling waves and vast expanse, can seem calm, even serene. But hidden beneath the sea's waves are a staggering abundance and variety of active creatures, engaged in the never-ending struggles of life—to reproduce, to eat, and to avoid being eaten. With Sex, Drugs, and Sea Slime, marine scientist Ellen Prager takes us deep into the sea to introduce an astonishing cast of fascinating and bizarre creatures that make the salty depths their home. From the tiny but voracious arrow worms whose rapacious ways may lead to death by overeating, to the lobsters that battle rivals or seduce mates with their urine, to the sea's masters of disguise, the octopuses, Prager not only brings to life the ocean's strange creatures, but also reveals the ways they interact as predators, prey, or potential mates. And while these animals make for some jaw-dropping stories—witness the sea cucumber, which ejects its own intestines to confuse predators, or the hagfish that ties itself into a knot to keep from suffocating in its own slime—there's far more to Prager's account than her ever-entertaining anecdotes: again and again, she illustrates the crucial connections between life in the ocean and humankind, in everything from our food supply to our economy, and in drug discovery, biomedical research, and popular culture. Written with a diver's love of the ocean, a novelist's skill at storytelling, and a scientist's deep knowledge, Sex, Drugs, and Sea Slime enchants as it educates, enthralling us with the wealth of life in the sea—and reminding us of the need to protect it.

Cuba Straits Dec 02 2019 The remarkable new novel in the Doc Ford series by New York Times–bestselling author Randy Wayne White. Doc Ford's old friend, General Juan Garcia, has gone into the lucrative business of smuggling Cuban baseball players into the U.S. He is also feasting on profits made by buying historical treasures for pennies on the dollar. He prefers what dealers call HPC items—high-profile collectibles—but when he manages to obtain a collection of letters written by Fidel Castro between 1960–62 to a secret girlfriend, it's not a matter of money anymore. Garcia has stumbled way out of his depth. First Garcia disappears, and then the man to whom he sold the letters. When Doc Ford begins to investigate, he soon becomes convinced that those letters contain a secret that someone, or some powerful agency, cannot allow to be made public. A lot happened between Cuba and the United States from 1960–62. Many men died. A few more will hardly be noticed.

Understanding Operating Systems Apr 29 2022 UNDERSTANDING OPERATING SYSTEMS provides a basic understanding of operating systems theory, a comparison of the major operating systems in use, and a description of the technical and operational tradeoffs inherent in each. The effective two-part organization covers the theory of operating systems, their historical roots, and their conceptual basis (which does not change substantially), culminating with how these theories are applied in the specifics of five operating systems (which evolve constantly). The authors explain this technical subject in a not-so-technical manner, providing enough detail to illustrate the complexities of stand-alone and networked operating systems. UNDERSTANDING OPERATING SYSTEMS is written in a clear, conversational style with concrete examples and illustrations that readers easily grasp.

The Roman City and its Periphery Jul 29 2019 The first and only monograph available on the subject, *The Roman City and its Periphery* offers a full and detailed treatment of the little-investigated aspect of Roman urbanism – the phenomenon of suburban development. Presenting archaeological and literary evidence alongside sixty-three plans of cities, building plans, and photographs, Penelope Goodman examines how and why Roman suburbs grew up outside Roman cities, what was distinctive about the nature of suburban development, and what contributions buildings and activities in the suburbs might make to the character and function of the city as a whole. With full bibliography and annotations throughout, this will not only provide a coherent treatment of an essential theme for students of Roman urbanism, but archaeologists, urban planners and geographers also, will have an excellent comparative tool in the study of modern urbanism.
