[SDI and the Alternatives](#) Oct 02 2022 The controversial nat. debate over strategic defense has been overshadowed by other nat. & global issues. Research programs for the Strategic Defense Initiative (SDI) continue, however, & the debate is likely to resume as visible results of that research begin to compete for a share of the nation's budget. This study considers strategic defense in the context of 4 competing strategic theories: deterrence through mutual assured destruction; deterrence through nuclear warfighting; deterrence relying on non-nuclear defense; & disarmament. Non-nuclear, space-based defense is not only feasible, but in some ways preferable to reliance on weapons of mass destruction. To support his case, he outlines a proposed actual system. Illus.

**Particulate and Organic Matter Fouling of Seawater Reverse Osmosis Systems** May 17 2021 Characterizing bulk organic matter in seawater and bay water by various analytical techniques and linking these measurements with fouling in membrane systems. Furthermore, it aimed for the development of the Modified Fouling Index - ultrafiltration (MFI-UF) at constant flux filtration as an accurate test to measure the particulate fouling potential of a feed water and predict the rate of fouling in reverse osmosis systems. A new semi-portable set-up has been successfully developed to perform MFI-UF tests at constant flux filtration. A significant effect of the filtration flux on the fouling potential was found. Consequences of this effect for reverse osmosis systems are that the fouling potential at low flux drops dramatically; for ultrafiltration systems it implicates that the rate of fouling increases at high fluxes. The observed effect of flux on the fouling potential has significant implications for fouling potential measurements. Deposition factors in RO systems varied between 0 and 1, depending on location and MFI pore size, which indicates differences in properties of the particles present. Fouling potential results in RO fouling rates of 0.2-1 bar/month depending on the pore size of the membranes used for MFI measurements. The fouling potential of the analysed raw waters is substantially reduced by conventional pre-treatment systems and ultrafiltration: for conventional pre-treatment 37 % - 74 % and ultrafiltration 60 % - 95 %, depending on the location and the MFI pore size.

*Digital Video and Audio Broadcasting Technology* Dec 24 2021 This practical guide offers all important digital television, sound radio, and multimedia standards such as MPEG, DVB, DVD, DAB, ATSC, T-DMB, DMB-T, DRM and ISDB-T. It provides an in-depth look at these subjects in terms of practical experience. In addition explains the basics of essential topics like analog television, digital modulation, COFDM or mathematical transformations between time and frequency domains. The fourth edition addresses many new developments and features of digital broadcasting. Especially it includes Ultra High Definition Television (UHDTV), 4K, HEVC / H.265 (High Efficiency Video Coding), DVB-T2 measurement techniques and practice, DOCSIS 3.1, DVB - S2X, and 3DTV, as well as VHF-FM radio, HDMI, terrestrial transmitters, and stations. In the center of the treatments are always measuring techniques and of measuring practice for each case consolidating the knowledge imparted with numerous practical examples. The book is directed primarily at the specialist working in the field, on transmitters and transmission equipment, network planning, studio technology, playout centers and multiplex center technology and in the development departments for entertainment electronics or TV test engineering. Since the entire field of electrical communications technology is traversed in a wide arc, those who are students in this field are not excluded either.

Data includes: nonproprietary names, functional category, synonyms, chemical names and CAS Registry number, empirical formula, molecular weight, structural formula, commercial availability, method of manufacture, description, pharmacopeial specifications, typical

properties, stability and storage conditions, incompatibilities, safety, handling precautions, regulatory acceptance, applications in pharmaceutical formulation or technology, use, related substances, comments, and specific references.

**Assessing Bacterial Growth Potential in Seawater Reverse Osmosis Pretreatment** Aug 27 2019 Seawater desalination is increasingly being used as a means to augment freshwater supplies in regions with high water stress, and reverse osmosis is increasingly the technology of choice because of the low energy consumption. However, seawater reverse osmosis (SWRO) systems suffer from various types of fouling, which can increase energy consumption and the use of chemicals during SWRO operation. In practice, pre-treatment systems are put in place to reduce the particulate and biological fouling potential of SWRO feed water. However, simple, reliable and accurate methods to assess the extent to which biological fouling potential is reduced during pre-treatment are not available for seawater. This research developed a new method to measure bacterial growth potential (BGP) using the native bacterial consortium in seawater. New reagents to extract and detect ATP in microbial cells were specifically developed for seawater. The new lysis and detection reagents overcame the salt interference in seawater and allow low detection of total ATP, free ATP and microbial ATP in seawater. Incorporating a filtration step further increased the sensitivity of the method six fold, enabling ATP detection of ultra-low levels of microbial ATP in seawater. The newly developed ATP-based BGP method was applied to monitor and assess the pre-treatment of five full-scale seawater desalination plants around the world. A good correlation was observed between BGP measured in SWRO feed water and the pressure drop increase in the SWRO systems, suggesting the applicability of using the ATP-based BGP method as a biofouling indicator in SWRO. Furthermore, a safe level of BGP ( In the future, on-line monitoring of BGP in SWRO feed water may further reduce the consumption of chemicals and energy and improve the overall sustainability of seawater desalination by reverse osmosis.

Methodologies for Knowledge Discovery and Data Mining Sep 08 2020 This book constitutes the refereed proceedings of the Third Pacific-Asia Conference on Knowledge Discovery and Data Mining, PAKDD '99, held in Beijing, China, in April 1999. The 29 revised full papers presented together with 37 short papers were carefully selected from a total of 158 submissions. The book is divided into sections on emerging KDD technology; association rules; feature selection and generation; mining in semi-unstructured data; interestingness, surprisingness, and exceptions; rough sets, fuzzy logic, and neural networks; induction, classification, and clustering; visualization; causal models and graph-based methods; agent-based and distributed data mining; and advanced topics and new methodologies.

Aquaculture Engineering Oct 10 2020 As aquaculture continues to grow at a rapid pace, understanding the engineering behind aquatic production facilities is of increasing importance for all those working in the industry. Aquaculture engineering requires knowledge of the many general aspects of engineering such as material technology, building design and construction, mechanical engineering, and environmental engineering. In this comprehensive book now in its second edition, author Odd-Ivar Lekang introduces these principles and demonstrates how such technical knowledge can be applied to aquaculture systems. Review of the first edition: 'Fish farmers and other personnel involved in the aquaculture industry, suppliers to the fish farming business and designers and manufacturers will find this book an invaluable resource. The book will be an important addition to the shelves of all libraries in universities and research institutions where aquaculture, agriculture and environmental sciences are studied and taught.' Aquaculture Europe 'A useful book that, hopefully, will inspire successors that focus more on warm water aquaculture and on large-scale mariculture such as tuna farming.' Cision

**Transforming Education Outcomes in Africa** Oct 29 2019 Good education changes lives. It is therefore unsurprising that improved schooling plays a central part in most development strategies. At the same time, the expansion of school attainment alone is not sufficient to guarantee improved welfare. This open access book focuses on one country in West Africa, Togo, to explore what a country that has successfully increased enrollment rates can do to enhance learning outcomes. The authors explore different avenues for improvement, including enhancing the efficiency with which resources are used; increasing the qualifications of teachers; and through greater community involvement in school management. There is scope for improvement along all these dimensions, yet changes at the margin are insufficient to bring about the transformation needed to bring about acceptable levels of learning. Important reading for anyone interested in understanding the pathways to improving the education system in Togo and other developing countries. **The Pomegranate** Aug 08 2020 The pomegranate, *Punica granatum* L., is one of the oldest known edible fruits and is associated with the ancient civilizations of the Middle East. This is the first comprehensive book covering the botany, production, processing, health and industrial uses of the pomegranate. The cultivation of this fruit for fresh consumption, juice production and medicinal purposes has expanded more than tenfold over the past 20 years. Presenting a review of pomegranate growing, from a scientific and horticultural perspective, this book provides information on how to increase yields and improve short- and medium-term grower profitability and sustainability.

*Soviet-British Relations Since the 1970s* Feb 11 2021 This collection brings together empirical and analytical studies of the nature and evolution of Soviet-British relations during the 1980s and looks forward to the 1990s. The relationship is firmly placed within the wider context of Soviet policy toward the West and NATO. The contributors examine mutual perceptions and policy perspectives; Soviet interests and objectives in dealing with Britain; and the role of economic, political, diplomatic, nongovernmental and security factors in determining policy outcomes. A concluding section evaluates the long-term significance of current and potential policy developments on both sides. *Soviet-British Relations* is the first volume to be produced by the Soviet foreign policy study group at Chatham House, and is published in association with The Royal Institute of International Affairs.

*Television Fundamentals* May 05 2020 Television today means moving pictures in colour with sound, brought to the viewer by terrestrial or satellite broadcast, cable or recording medium. The technique and processes necessary to create, record, deliver and display television pictures form the major part of this book. *Television Fundamentals* is written in clear English, with a minimum of mathematics. Readers are taken, in a logical sequence of small steps, through the fundamental principles of the subject, with practical applications and a guide to troubleshooting included. Encoding, decoding, recording and transmission are treated in depth. John Watkinson is an independent consultant in digital video, audio and data technology. He is a Fellow of the AES and presents lectures, conference papers and training courses worldwide. he is the author of numerous other Focal Press books, including: *Compression in Video and Audio*, *The Art of Digital Audio* and *The Art of Digital Video* (now in their second editions), *The Art of Data Recording*, *An Introduction to Digital Audio*, *An Introduction to Digital Video*, *The Digital Video Tape Recorder and RDAT*.
