Flying on Your

Own Wings

May 29 2022 Some have said that if God had wanted us to fly, He would have given us wings. And yet, we were given the ability to dream, to think with our heads, to have courage in our hearts, and to build with our hands. Truly, we have been given everything we need: We really can fly on our own wings! Chris Heintz is a professional aeronautical engineer with a prolific career spanning over 40 years designing and building light aircraft. Recognized worldwide as a uniquely talented and accomplished designer, his aircraft are known and appreciated for their simplicity of

construction, pilot-friendly cabins and controllability as well as remarkable performances.

Today, Chris Heintz designs are flown throughout the world, mostly by recreational pilots who have assembled their own planes from a kit. His most popular models are also factory-assembled and sold as ready-to-fly sport aircraft on three continents. In FLYING ON YOUR OWN WINGS, Mr. Heintz shares his knowledge and insights into the art and science of light aircraft design. He "walks" readers through the essential understanding and skills required to conceive, develop, build and even test

fly their own personal light airplane. Basic mathematics, essential aerodynamics and stress analysis are just a few of the chapters of this fascinating book. Heintz even provides a sample design to help would-be designers take their first step towards imagining and creating their own wings. Truly a beginner's guide to everything you need to know in order to achieve that age-old dream: To fly on your own wings!

The Old Bold Pilot
Dec 12 2020 Capt. Lumba has been a pilot, union leader and airline executive. He is one of Indian aviation's legends. His memoir will take you through the by-lanes of Indian Civil Aviation in all its glory. The book explains the Pilot Strike of 1992, the creation and success of Alliance Air (possibly India's first low-cost carrier), the operational start-up of IndiGo, India's premier and most successful low-cost carrier. Finally, it

covers the safe landing at Laksh Farms, a place termed as a piece of heaven on earth! Readers will find this book more than just a memoir.

There are valuable lessons of personal behaviour and integrity that are invaluable to ruminate about. In addition, the historically accurate perspectives of starting and running an airline provide valuable tips for students studying aviation management or even for executives operating in that space today.

age nineteen, Bill Grenier never imagined that one day he'd be captain of the largest commercial plane the world had seen, flying the highest profile routes of a proud national carrier. Even less could he have imagined, at age nineteen and with barely a penny to his name, that he'd one day be a wealthy man. But he would ultimately control an empire worth nearly a billion dollars. With liberal doses of wit and humour, Miles to Millions shows what a little luck, lots of perseverance, and an appetite for adventure can do. From boarding house to boardroom, from cradle to cockpit,

Grenier offers a fascinating story of success both as a commercial pilot and as a businessman. Filled with anecdotes you'd never expect from a single career from acting as repo man taking planes for payment to saving hundreds of passengers in a stricken 747 with a collapsed co-pilot Miles to Millions is a high-flier of a story bound to entertain both aviation experts and enthusiasts alike.

and its supporting technology. Aiming at identifying the challenges such a technology has to master. It contains extensively reviewed papers given at the Seventh International Conference on New Trends in Software Methodology Tools, and Techniques (SoMeT_08) held in Sharjah, United Arab Emirates. One of the important issues addressed in this book is handling cognitive issues on software development to adapt to user mental state. Tools and techniques have been contributed here. Another aspect challenged in this conference was intelligent software design in software

security. This book, and the series, will also contribute to the elaboration on such new trends and related academic research studies and development." -- Book Jacket.

organizational development of the Myanmar armed forces. It analyses four different aspects of the Tatmadaw: military doctrine and strategy, organization and force structure, armament and force modernization, and military training and officer education. It sets out security perceptions and policies, charting developments in each phase against the situation at the time, and also notes the contributions of the leading actors in the process. Since early 1990s, the Tatmadaw has implemented a force modernization programme. This work studies rationales and

strategy behind the force modernization programme and examines the military capabilities of the Tatmadaw. Drawing extensively from archival sources and existing literature, this empirically grounded research argues that, while the internal armed security threat to the state continues to play an important role, it is the external security threat that gives more weight to the expansion and modernization of the Tatmadaw since 1988. It also argues that, despite its imperfections, the Tatmadaw has transformed from a force essentially for counter-insurgency operations into a force capable of

fighting in limited conventional warfare.
